The Most Versatile of the Kelly Disc

The CL1 Disc Chain is a concave disc made from hard wearing steel alloy with a hook and eye for linking together. The individual links make servicing and maintenance a breeze.

CL1 Disc Chains are ideal for laying down and splitting residue, thereby helping to accelerate microbial action. While working at a constant, shallow depth, these discs are also the perfect tool for weed control and leveling soil, while preserving precious moisture and soil health to give the farmer a perfect seedbed.

With savings in fuel usage, labor and chemicals there isn't a more cost effective way to prepare a seedbed and improve your bottom line.
