## A revolutionary option for soil management practices

CL2 Disc Chain consists of a replaceable, sharpened, concave disc, mounted to a cast steel alloy, weighted hub with a hook and eye for linking together.

The design of the CL2 Disc Chain makes servicing and replacement simple and cost effective, while the smooth unobstructed face means there is no snagging or mud build up in wet conditions.

The CL2 Disc Chains cut and split residue to accelerate decomposition, to dig reliably and to remove the most stubborn of weeds and root systems. The sharp discs provide penetration into the toughest soils while the weight and shape of the boss keeps the discs cutting and controls the working depth.

Superb heavy residue management and reliable weed control makes the CL2 Disc Chain the perfect addition to your Kelly Tillage System.
