

Kelly Spike Disc Chain

Kelly
TILLAGE SYSTEM

www.kellyharrows.com

A multi- directional light tillage disc

Profile cut 3/4" wear resistant steel with 10 robust spikes and 5" spacing give this disc real effectiveness.

The spikes gently till the soil surface, removing weeds, levelling and crumbling the soil. They offer a lighter tillage option than the cast discs and are ideal in soils that tend to become fine when worked.

This disc creates a perfect seedbed in a wide range of conditions from heavy clay soils to lighter sandy soils.

The Spikes are extremely versatile and can be fitted either trailing or leading. In the trailing direction the spikes are angled backwards and are self cleaning. They work brilliantly in wet conditions, just tilling the surface, exposing dark soil and aerating the top. In the more aggressive leading orientation, the spikes work as a first pass light tillage tool, levelling and preparing the seedbed.

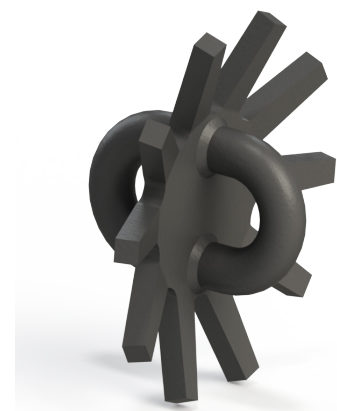

The shallow working depth means the spike discs are light to pull and will work in wetter conditions.
